Table S7. Model summaries for intercept-only models using only the dominant effect size (e.g., excluding minority converted effect sizes). Model estimates ± 95% CIs and test statistics are reported along with sample sizes and residual unexplained heterogeneity (I^2), decomposed by hierarchical model levels (article and observation). The effect size used is given in the heading of each model (SMD=standardized mean difference or Hedges' g; Zr=correlation coefficient; lnOR=log odds ratio).
